Older Macintosh computers (PowerMac G3 and lower) will only have a round serial port. You can use the AccelScan 2110 Serial scanner with no adaptors, as shown in the pictures below.
If you have Macintosh computers with USB ports, we recommend that you use the AccelScan 2110 USB scanner. However, if you already own an AccelScan 2110 Serial scanner, it can be used with the Keyspan USB Twin Serial Adaptor (model USA-28GX).

On newer Macintosh computers (iMacs, G3, and G4 computers, etc.) that do not have a serial port, your configuration may look like this.
Older Windows computers may only have a 9- or 25-pin Serial port available. In this case, you would want to use the AccelScan 2110 Serial scanner with a 9-pin and possibly a 25-pin Serial port adaptor as shown below. You may purchase the adaptors from your local electronics store.

Some Macintosh and Windows computers include USB ports. On a Macintosh computer the ports can be found in three places as shown below: 1. On the back of the computer tower. 2. On the side of the keyboard. 3. On the side of the computer.

On a Windows computer, port(s) will usually be found on the back of the computer tower. Some models include one or more USB port(s) on the lower front of the computer for easier access.
